

Practical 11: Compare AI vs Human Writing

Aim:

To compare AI-generated content with student-created content.

Objectives:

- To identify difference in writing
- To understand AI limitations

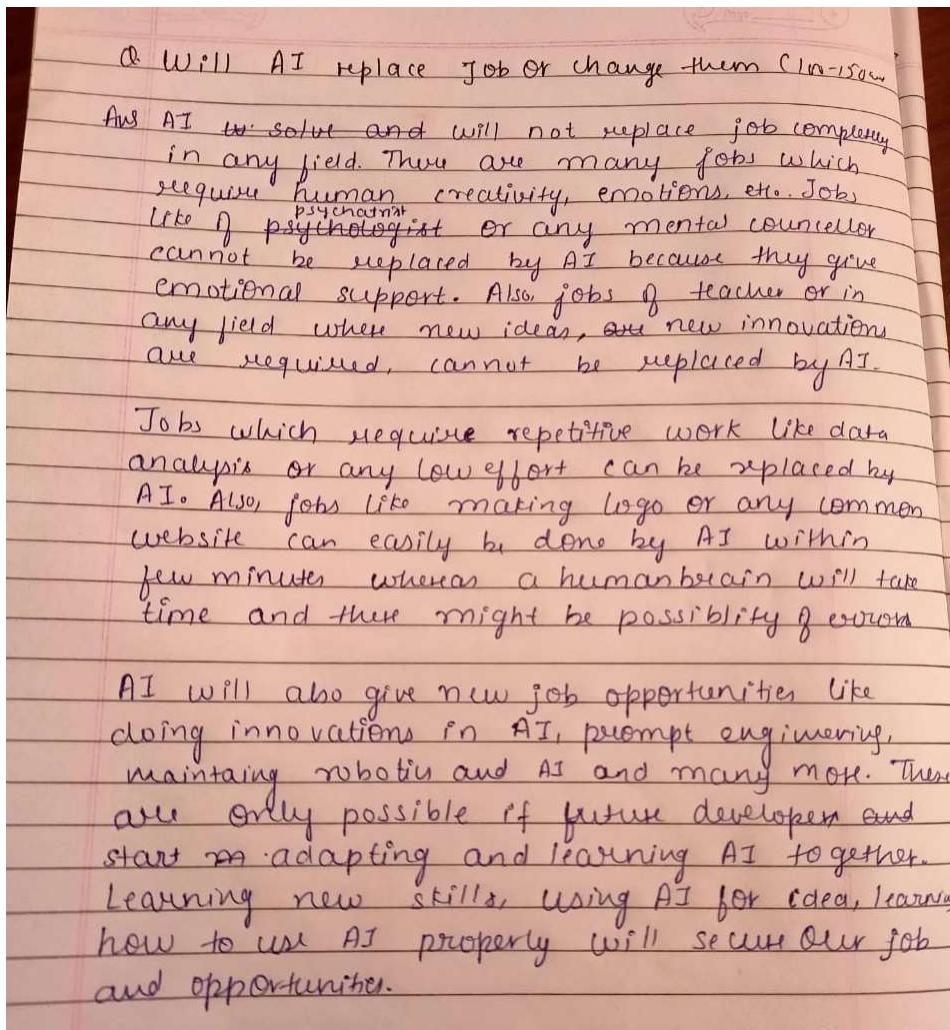

Materials Required:

- AI tool

Procedure:-

1. Write paragraph manually – Compose a paragraph yourself using your own ideas, wording, and structure on the selected topic.
2. Generate same topic using AI – Use an AI tool to produce another paragraph on the same topic for comparison.
3. Create comparison table – Organize both paragraphs side-by-side in a table to compare style, clarity, tone, and content differences.

By Student:

By AI(copilot):

Write a 100–150 word paragraph on the topic: "Will AI replace jobs or change them?"

Artificial intelligence is unlikely to simply replace jobs; instead, it will transform them in profound ways. Routine and repetitive tasks—such as data entry, scheduling, or basic customer queries—are increasingly automated, freeing human workers to focus on creativity, problem-solving, and interpersonal skills. Rather than eliminating employment, AI often reshapes roles by augmenting human capabilities, creating demand for new skills in areas like data analysis, programming, and ethical decision-making. For example, healthcare professionals may use AI to interpret scans more quickly, but the human judgment and empathy in patient care remain irreplaceable. Similarly, teachers can leverage AI tools to personalize learning, yet their guidance and mentorship are essential. The future of work will likely be defined not by machines replacing humans, but by humans collaborating with machines to achieve greater efficiency, innovation, and adaptability in a rapidly evolving economy.

Comparison Table:

Aspect	I. Human-Generated Content	II. AI-Generated Content
Tone	Personal, conversational, and handwritten	Formal, structured, and polished
Examples Used	Psychologist, mental counsellor, logo design, website creation	Healthcare professionals, teachers, data entry, customer queries
Main Argument	AI will not fully replace jobs; it will change them and create new opportunities	AI transforms jobs by automating tasks and enhancing human roles
Focus Areas	Emotional support, creativity, learning AI for future jobs	Collaboration between humans and AI, skill development, efficiency
Language Style	Simple, student-like, with spelling and grammar imperfections	Grammatically correct, professional vocabulary
Length & Structure	Informal paragraph with mixed points	Organized paragraph with clear flow and transitions
Perspective	First-person, reflective, and motivational	Third-person, analytical, and informative
